About Web Designing

Web Designing is all about Creativity. Learning should be fun and creating your own Web-design will be more interesting. We at Skill Mentors Academy is the learn with fun Institute. A Web-page is not all about creating a design and checking if it's working all fine. The real check is when a web-page is compatible with all size of devices where it is visited and it is really important.

Scope of Web Designing

Web Designing begin a foundation where lies the future developments. With no knowledge about HTML, you will find it difficult to learn other web languages but if you know HTML, it will quite be easy and interesting to learn other web languages. Many companies recruit web designers for two things. One for internal things like maintaining their website and for maintaining the web development activities from the client. All the clients and partners will have their own webpage to get maintained, so the role of a web designer is necessary for almost all companies.

Project Based Learning

The program will enable a learner to implement the preceding objectives through a project-based learning methodology. The program will enable a learner to implement the preceding objectives

through a project-based learning methodology. The students are expected to spend at least 70% of their time on project work during the program. 2 Projects that would be used during the upcoming batch are:

Portfolio Website

Today, portfolio website is the most needed form of initial branding to all professionals. Development of portfolio website requires lot of creativity and developers will face challenges in maching the preferences of the customers.
